PDAsync³

Welcome to PDAsync. PDAsync software runs on a Windows PC to synchronize data between two data sources, such as a PIM (Personal Information Manager) and a mobile device. PDAsync consists of a synchronization engine and translators, which seamlessly integrate with your data source's features and data. PDAsync makes it easy to synchronize the following data types:

- **Contacts:** Keep track of key information such as names, addresses, and phone numbers.
- **Calendar:** You can enter any meeting, phone conference, or reminder into the Calendar and instantly view your appointments for any date or time.
- **Tasks:** These To Do lists are handy to keep track of items that you need to complete.
- **E-mail:** PDAsync supports synchronization of incoming messages, outgoing messages and sent items.

To install PDAsync, you must have the following:

- An IBM compatible computer Pentium or above
- Microsoft Windows 98SE/Me/2000/XP
- 32MB RAM
- 20MB free hard disk space
- Supported handheld operating system and syncing software installed
- Handheld cradle or synchronization cable

To install PDAsync, you must do the following:

1. Close all open programs.
2. Start the PDAsync installation program.
3. Follow the installation instructions that appear on your screen.
4. When installation is complete, click Finish.
5. If prompted to reboot, click OK.
